

Review Module H5 Babies & Children

Level Quantum Biofeedback Practitioner

Remember to record your hours and score for your IMUNE Qualification Application.

No.	Lev	Question	Ans.
General			
1.	QBP	Because babies and animals are less resistant to the equipment there are settings and options within the program specific to them	
2.	QBP	Babies are as easy to work on as an animal since they hold no resistance.	
3.	QBP	The mother can hold the child with awareness that some reactive issues may be from the mother.	
4.	QBP	The mother can even work as a surrogate for the child at this point since they share so many frequencies with awareness that some reactive issues may be from the mother.	
5.	QBP	There are locations in the program for babies such as Short Sarcode Rx and Biofeedback	
6.	QBP	The minimum age for working with a human is 3 years.	
7.	QBP	Babies and young children must be strapped up to the system.	
8.	QBP	It is an option to use the head harness on the stomach of a baby/young child.	
9.	QBP	Subspace testing with babies/young children may be quite accurate.	
10.	QBP	For therapy it may be preferable to use the head harness on the babies stomach.	
11.	QBP	Babies/young children require higher power than adults.	
12.	QBP	Babies/young children may have less obstruction to subtle dialogue within the program.	
13.	QBP	Babies/young children may benefit from relatively light and short therapies.	
14.	QBP	The red/purple value scores in testing babies and young children may be a more accurate reflection of what is actually happening on both the surface and deeper than with adults.	
In utero facilities			
15.	QBP	Is it recommended to do testing or therapy on a pregnant client or in-utero infant	
16.	QBP	Working on a pregnant client is done 'at your own risk' knowing that should any complications of pregnancy happen you will have to prove no fault.	
17.	QBP	Testing and treating pregnant clients is totally unsafe.	
18.	QBP	Testing and treating pregnant clients is in principle safe.	
19.	QBP	It is better to test and treat pregnant clients from the second trimester onwards.	

20.	QBP	If there is a miscarriage the legal onus may be on the therapist to prove they had no role in this.	
21.	QBP	If pregnant is entered in demographics then is it possible to test the baby?	
22.	QBP	The option to test the baby is selected in demographics.	
23.	QBP	The option to test the baby shows in the test screen, treatments drop down after scanning the mother.	
Pregnancy			
24.	QBP	Pregnancy is an area of concern when working on the EPFX/QXCI or EPFX-usb/SCIO; although there is no evidence of any damage to the mother or child and all pregnancies so far involved using the equipment have had wonderful results.	
25.	QBP	The legality of the working on a pregnant woman causes great concern. Should anyone have a lawsuit against a practitioner it would be the practitioner's responsibility to prove they had nothing to do with these problems. Because of this most practitioners choose not to run the equipment on a pregnant person.	
26.	QBP	Working on a pregnant woman should not be a big deal since the client would have to prove you did something wrong and that is impossible for them to do.	
27.	QBP	There is a location to check on the program for a pregnant woman, should you decide to take the risk, which tells the machine how many weeks pregnant the client is. You must update this at each session	

If a question or the answer is unclear please discuss with colleagues/your trainer. It will not be possible for IMUNE to respond to individuals for clarification. If after discussing as above clarification is required then please do contact QBP@imune.net.
